

Osteoarchaeological Project

Basic human osteology, skeletal analysis and curation of human remains

Interested in learning more about human remains or need to practice your osteology skills?

North Hertfordshire Museum is hosting a one-day human remains workshop as part of a project to further our understanding of health in the Roman and early Medieval Periods in Eastern England.

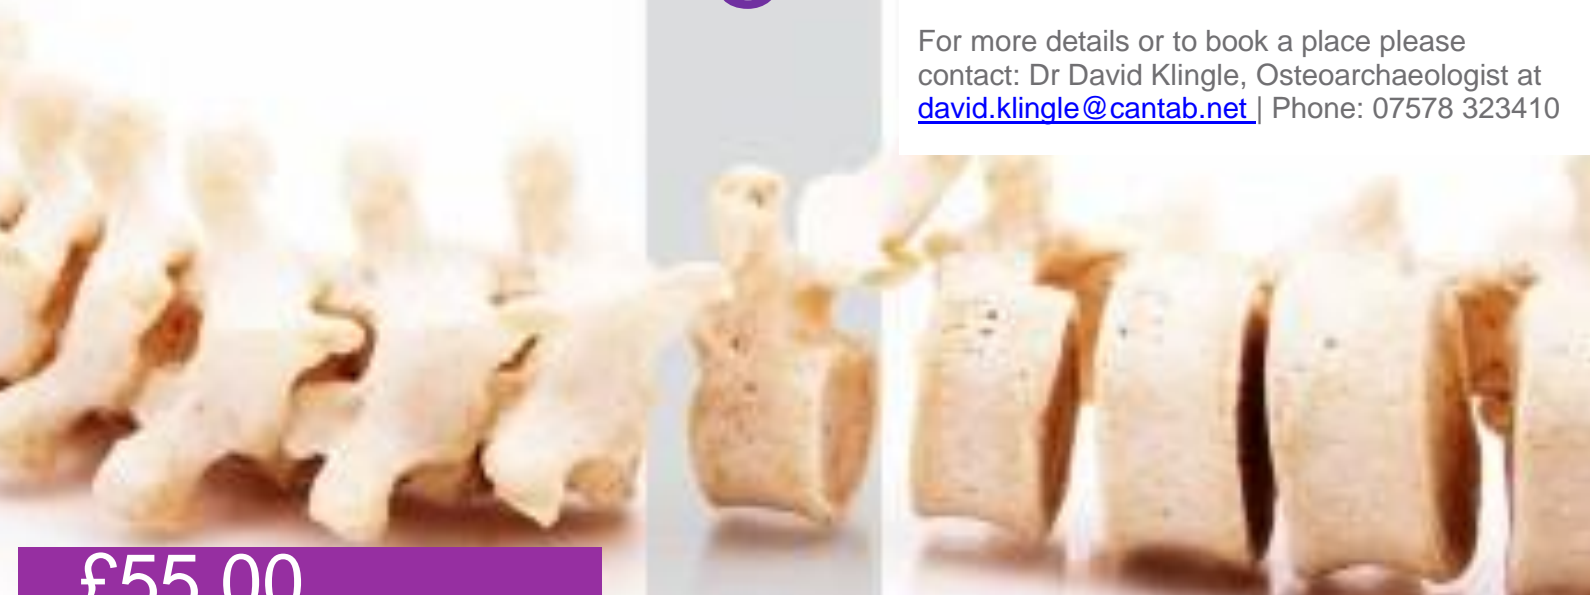

This is an ideal opportunity for students of archaeology and anyone that wants to learn more about osteology and gain hands-on experience with human remains. Classes are limited to twelve students to ensure maximum access to remains.

The day will include:

- Identifying different bones and the layout of a human skeleton
- Determining sex, age, and height of individuals
- Identifying different pathologies and the health of a person at death
- Using skeletal remains and other evidence to reconstruct life in different periods
- Learning how to clean, box, and curate remains
- Reviewing the different stages of skeletal remains from burial, archaeological excavation, osteological study, curation or reburial.

9 July 2016
North Hertfordshire Museum
Brand Street, Hitchin SG5 1JE
